WORK EXPERIENCE

BrainyBeam Technologies Pvt.Ltd: - Developed and implemented key React.js functionalities during a one-week intensive internship, including React Hooks for state management, component state handling, and routing implementation for single-page application navigation. - Gained practical experience with modern React development patterns and frontend architecture.	May-2025
Oasis Infobyte(Java Development Intern): - Developed an ATM interface and interactive number guessing game during a one-month Java development internship. - Gained hands-on experience with object-oriented programming principles, user input handling, and Java core libraries while implementing functional software solutions.	Jun-2023 – Jul-2023

PROJECTS

BlogSpace – Blogging Website: - Build a comprehensive blogging website using MERN stack with secure JWT and Google OAuth authentication. - Built feature-rich blog editor with draft/publish functionality, commenting system, trending sections, and category filtering. - Implemented responsive UI with React and Tailwind CSS, including user dashboard, pagination, and email OTP for password recovery. Utilized MongoDB for complete data storage and management.

NEXORA:

- Build a MERN stack language exchange platform where users connect with native speakers for interactive language learning. - Leveraged Stream API for real-time messaging and video calls, enabling authentic language practice sessions. - Built with secure authentication, Zustand for state management, and TanStack Query for data fetching, delivering a smooth and responsive user experience.
